

TRAFFIC MEMO

To: City of Dripping Springs, Texas
From: Massoud Tabrizi, PE
Date: July 7th, 2022
Re: 100 N Canyonwood Drive, Dripping Springs, Texas – Christian Brothers Automotive Facility

OVERVIEW

This traffic generation memo is prepared for the proposed, Christian Brothers Automotive facility at 100 N Canyonwood Drive, Dripping Springs, Texas. This memo provides an overview of the anticipated traffic generation associated with this site.

BACKGROUND

The subject development is located at the northeast corner of North Canyonwood Drive and State Highway 290. The subject property is bounded to the north and east by vacant lands, to the west by the North Canyonwood Drive and to the south by State Highway 290. The access to the development will be via a proposed 24' wide driveway from North Canyonwood Drive. All existing adjacent roadways (Canyonwood Drive and State Hwy 290) are paved.

The purpose of this development is to operate a light automotive service and repair facility that will have a building with an approximate area of 6,000 square feet (SF), associated parking and landscaping improvements. With 30 parking spaces available, the existing site will provide adequate parking to accommodate an estimated 10 to 20 vehicle repairs a day. An average of eight to ten employees will report to the site each work day.

TRIP GENERATION

Operational Traffic

The Institute of Transportation Engineers (ITE) manual on Trip Generation, 9th Edition (see attached excerpt), was referenced to approximate the anticipated trip generation related to the proposed use. The ITE manual provides guidance on trip generation based on a common parameter. For this use, the average generation in the morning Peak Hour is 2.25 trips per 1,000 SF of leasable square footage and the evening Peak Hour is 3.11 trips per 1,000 SF of leasable square footage. Approximate trips were rounded up to the nearest whole number. The ITE manual also predicts the percent of trips that are entering vs. exiting. The following table depicts the anticipated trip generation for the operation based on the above referenced average trip generation rates per 1,000 SF of leasable area:

Table 1. Operational Traffic Trip Generation Summary Table			
<u>Average Weekday Operation</u>			
Morning (AM Enter)	Morning (AM Exit)	Evening (PM Enter)	Evening (PM Exit)
66% of AM Trips	34% of AM Trips	48% of PM Trips	52% of PM Trips
9	5	9	10
Automobile Care Center (942) rates are based on 6 studies.			

CONCLUSION

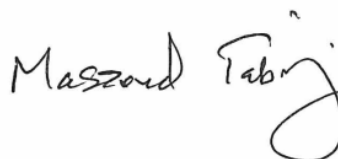

The adjacent roadways appear to be functioning well and the area is clearly planned to accommodate similar uses. Based on this finding, the current proposed development will not adversely impact the traffic conditions.

Please do not hesitate to contact me at (281) 506-7119 Ext 103 or via email at massoud.tabrizi@acengineers.com, if you have any questions or if you need additional information.

Sincerely;
DAC Engineering
